

Web Developer, C++, SQL, C#, .Net, JAVA, HTML

A great opportunity has arisen for a Web Developer to work in one of the most beautiful parts of the country, with rolling hills and a world renowned coast, and good opportunities to enhance your own training and development. If you're looking for a break from the city or away from the treadmill of an agency then this could be right up your street.

This is a new position for an in-house developer in a strongly web-focussed company. As part of the Information Systems team you will lead the way in the dynamic and exciting development for our main website (and some smaller projects).

Although bug fixing will be part of the role, the main role is taking the exciting (but grounded in reality) ideas we have for the site and using your magic to turn them into reality.

Rest assured this isn't a simple maintenance role, the unique and original projects already discussed will provide real challenges to the right candidate. Although you will be the primary developer we envisage times when you will also be working as part of a team using third party agencies and contractors to complete the larger or time critical projects.

Running primarily on Microsoft technologies (**.Net, C#, MS SQL**) with a bit of the usual standard web technologies (**javascript, jQuery, HTML5, CSS3**) should not be an issue for you. However it would be even better if you are a certified Sitecore Developer as that is our underlying CMS. If you are not but your .Net skills are top notch and you have the desire to achieve it then **we can arrange for your training to achieve it.**

Bluestone National Park Resort is a highly respected premium holiday resort nestled in the middle of the Pembrokeshire countryside. Our guests love us, reflected in industry leading net promoter scores and we are a young enough company to still be extremely dynamic and rapidly evolving.

Desired Skills and Experience

Essential qualities:

- Very experienced .Net (C#) developer with a good portfolio of previous work similar in standard and complexity to the Bluestone main site
- Experienced developing with Visual Studio and TFS with source control
- Experienced in CSS3 with a good understanding of their use in contemporary design
- Knowledge of basic SQL and SQL Server and interfacing to a website
- Strong javascript knowledge, especially using jQuery libraries
- Strong HTML5 knowledge
- Good knowledge and demonstrable ability to use web services to communicate with external systems
- Good knowledge of "mobile first" and responsive design
- Great troubleshooting ability and can show logical thinking and problem solving "outside the box"
- Has security at the forefront of all coding choices

- You can think about business requirements rather than blindly following a brief
- Ability to think clearly and calmly when faced with issues or problems.
- Ability to cope well with the demands of a rapidly growing company.
- Proven ability to work to stringent deadlines.

Highly Desirable qualities:

- Strong Sitecore (v6+) programming experience
- Current Sitecore Developer qualification
- A sound ability to provide accurate timescales
- A good understand of UX and ability to program a great UX based upon contemporary thinking
- Cross browser compatibility programming
- A good eye for style and design
- Understanding of Agile or RAD project methods
- Understanding of PCI compliance
- Wordpress & Sharepoint knowledge may prove useful for some other projects
- Exposure to App (Android/iOS) development experience would prove beneficial
